TETIANA KRAVCHUK

AI EVALUATION AND RELIABILITY ENGINEER | APPLIED AI ENGINEERING

Grafton, MA | (978) 968-5469 | tetiana.kravchukqa@gmail.com | linkedin.com/in/tetianakravchuk
tetianakravchuk.com | github.com/tetianakravchuk | U.S. Citizen

PROFESSIONAL SUMMARY

Quality engineering and AI evaluation leader with 10+ years of experience building automated validation, API and data-quality controls, CI/CD release gates, and production diagnostics. At Advisor360°, configure and evaluate authorized internal AI-assisted meeting workflows through prompt and extraction logic, structured-output schemas, transcript-grounded review, failure investigation, and regression coverage. Independently designed, built, and deployed World Publishing Houses, an agentic RAG platform with tool calling, MCP, evaluation harnesses, provenance, human review, and observability. M.S. in Data Science, AI and Machine Learning.

CORE SKILLS

AI Evaluation: LLM and agent evaluation, golden datasets, deterministic checks, LLM-as-a-judge, rubric design, regression testing, quality gates
AI Engineering: Python, FastAPI, Pydantic, structured outputs, tool-calling agents, MCP, RAG, prompt and context management
Safety and Reliability: groundedness, factual consistency, unsupported-claim detection, prompt injection, tool misuse, provenance, human-in-the-loop review
Observability and Delivery: agent tracing, latency/token/cost/failure telemetry, REST APIs, PostgreSQL, pytest, Docker, GitHub Actions, Jenkins, CI/CD

PROFESSIONAL EXPERIENCE

Lead QA Automation Engineer | Advisor360° — Apr 2022-Present

Weston, MA

- Configure and evaluate an authorized internal AI-assisted workflow that converts meeting transcripts into summaries, action items, and structured system records; compare outputs with source transcripts and downstream data requirements.
- Create and refine prompts, extraction logic, structured-output schemas, expected behaviors, evaluation criteria, and representative edge cases for AI-generated meeting information.
- Assess completeness, factual consistency, attribution, unsupported claims, schema validity, and downstream usability; convert important failures into repeatable regression scenarios.
- Investigate failures across context assembly, retrieval results, tool calls, permissions, APIs, transformations, and persistence using Python, SQL/PostgreSQL, service logs, and source-to-output comparisons.
- Lead automation and reliability work across complex fintech systems, translating risk into acceptance criteria, failure taxonomies, regression coverage, CI/CD controls, and evidence-based release decisions.

INDEPENDENT AI ENGINEERING PROJECT

World Publishing Houses | Independent Applied AI Platform — 2025-Present

Python | FastAPI | Pydantic | PostgreSQL | Agents | MCP | RAG | Evaluation | Observability

- Designed, built, and deployed a source-backed agentic RAG platform for publisher discovery, research, enrichment, and verification, preserving provenance from retrieval through human review.
- Developed FastAPI services and tool-using agents with MCP integrations, retrieval and context assembly, Pydantic structured outputs, PostgreSQL persistence, and controlled failure handling.
- Built evaluation harnesses and golden datasets with deterministic assertions, model-assisted scoring, LLM-as-a-judge rubrics, prompt/RAG/agent regression tests, and CI release gates.
- Implemented source-to-entity lineage, prompt and dataset versioning, duplicate detection, safety checks, and human-review workflows for unsupported claims and rights-related risk.
- Instrumented agent and tool traces plus latency, token, cost, failure, and source-health telemetry to support debugging, quality monitoring, and evidence-based release decisions.

ADDITIONAL PROFESSIONAL EXPERIENCE

Lead QA Automation Engineer | Peapod Digital Labs **Oct 2017-Apr 2022**

Quincy, MA

- Led quality strategy, automation architecture, defect triage, and release validation for large-scale e-commerce web and native mobile products across cross-functional Agile teams.
- Built reusable Java, Selenium, Appium, REST API, database, performance, and production-smoke validation frameworks and integrated them into CI/CD pipelines.
- Used logs, SQL, service responses, and data comparisons to isolate root causes, expose regressions, and improve release reliability.

Software QA Tester | Infomatrix Global **Mar 2015-Oct 2017**

Boulder, CO

- Automated functional, integration, REST API, load, and performance validation and translated investigation findings into actionable engineering defects.
- Built repeatable Jenkins-based validation and diagnostic workflows supporting reliable release decisions.

SELECTED DATA SCIENCE PROJECT

Real Estate Price Modeling | Boston University **2026**

- Compared linear and nonlinear models using Python, pandas, scikit-learn, feature engineering, regularization, and cross-validation; evaluated error and generalization with Random Forest.

TECHNICAL SKILLS

Languages and Data: Python, Java, SQL, PostgreSQL, pandas, scikit-learn, Pydantic, JSON, structured outputs

AI and Evaluation: LLMs, tool-calling agents, MCP, RAG, retrieval evaluation, golden datasets, LLM-as-a-judge, prompt regression, human review

APIs and Quality: FastAPI, REST APIs, pytest, Selenium, Appium, schema validation, API automation, data validation, root-cause analysis

Delivery and Observability: Docker, Git, GitHub Actions, Jenkins, CI/CD, tracing, latency/token/cost/failure telemetry, release gates

EDUCATION

M.S., Data Science, AI and Machine Learning | Boston University | June 2026

Computer Science and Programming | Quincy Community College | 2020

Agricultural Business | Mykolaiv, Ukraine | 2011
