

TETIANA KRAVCHUK

AI QA ENGINEER | AI QUALITY ENGINEER | LLM EVALUATION

Boston, MA | (978) 968-5469 | tetiana.kravchukqa@gmail.com | [linkedin.com/in/tetianakravchuk](https://www.linkedin.com/in/tetianakravchuk) | US Citizen

PROFESSIONAL SUMMARY

AI Quality Engineer and senior QA automation professional with 10+ years of experience building quality strategies, automation frameworks, and release controls for complex fintech, e-commerce, web, mobile, REST API, data, and AI-assisted systems. Combines Python and Java automation, SQL/PostgreSQL investigation, CI/CD quality gates, and an M.S. in Data Science, AI, and Machine Learning from Boston University.

Hands-on AI-quality experience includes designing evaluation harnesses, golden datasets, prompt evaluation and regression tests, agentic-workflow scenarios, source-grounding checks, hallucination and unsupported-claim detection, failure taxonomies, AI telemetry, and latency/cost validation. Experienced in data-quality auditing, ETL and ingestion validation, predictive-model evaluation, root-cause analysis, product analytics, and translating technical findings into release decisions and executive KPIs.

CORE SKILLS

AI Quality & LLM Evaluation: AI/LLM evaluation, AI-agent and agentic-workflow testing, evaluation harnesses, prompt engineering, prompt versioning and regression, evaluation rubrics, golden/reference datasets, test-data management, source-grounding validation, hallucination and unsupported-claim detection, factual consistency, adversarial and edge-case testing, guardrails, failure-mode analysis, AI telemetry, latency/cost evaluation

QA Engineering: test strategy, test planning, test-case design, automation framework development, API contract validation, CI/CD quality gates, resilience and retry testing, functional, integration, system, end-to-end, regression, smoke, exploratory, UAT, accessibility, visual, cross-browser, mobile, API, database, performance/load, and risk-based testing

Data Quality & Analytics: SQL investigation, PostgreSQL, data profiling, validation rules, schema and relational-integrity testing, data ingestion and pipeline testing, metadata and provenance validation, anomaly detection, ETL validation, EDA, feature engineering, predictive-model evaluation, product analytics, experimentation, KPI dashboards

Languages & Frameworks: Python, Java, SQL, TypeScript/JavaScript, pandas, NumPy, scikit-learn, FastAPI, Pydantic, SQLAlchemy, Alembic, Next.js, React, pytest, Playwright, Selenium WebDriver, Appium, REST Assured, Cucumber/BDD, TestNG, JUnit

Tools & Delivery: REST APIs, Postman, Swagger/OpenAPI, Docker, Git, GitHub Actions, Jenkins, Bamboo, Bitbucket, CI/CD, Maven, Sauce Labs, Selenium Grid, JMeter, BlazeMeter, ReadyAPI, Jira, Zephyr, TestRail; production monitoring, observability, defect lifecycle, root-cause analysis, release readiness, quality metrics, Agile/Scrum

PROFESSIONAL EXPERIENCE

Lead QA Automation Engineer | Data Science Contributor | Advisor360°

Apr 2022 – Present

Weston, MA

- Design and maintain test strategies, automation frameworks, and system integration/regression coverage for complex fintech web, mobile, REST API, and backend workflows using Python, Appium, Docker, Swagger/OpenAPI, and CI/CD tooling.
- Partner with Product, Engineering, and Business stakeholders on QA and an authorized cross-team data science assignment, translating requirements and business questions into acceptance criteria, test scenarios, analyses, KPIs, and actionable recommendations.
- Execute SQL investigations and exploratory data analysis across enterprise PostgreSQL data to evaluate advisor behavior, customer engagement, workflow friction, anomalies, and AI-product adoption.
- Engineer features and validate predictive models for advisor productivity, client engagement, churn risk, and recommendation use cases using Python, SQL, pandas, and scikit-learn.
- Build ETL and automated data-validation workflows; collaborate with Data Engineering on data quality, schema validation, analytical data models, data integrity, and reproducible investigations.
- Evaluate AI features using adoption, latency, inference cost, user satisfaction, and productivity metrics; communicate findings through executive dashboards and stakeholder presentations.
- Investigate UI, REST API, log, database, and data-pipeline failures; reproduce defects, isolate root causes, assess severity and regression risk, validate fixes, support release-readiness decisions, and mentor QA engineers.

Founder | AI Quality & Data Product Engineer | World Publishing Houses

Current

Independent Project

- Build and quality-engineer a source-backed, full-stack publishing intelligence platform spanning publishers, works, translations, countries, languages, market coverage, and rights-related signals using Python, FastAPI, SQLAlchemy, PostgreSQL, Next.js, and TypeScript.
- Design and evaluate AI-assisted research, enrichment, summarization, discovery, and monitoring workflows for citation accuracy, source grounding, factual consistency, completeness, ambiguity, uncertainty handling, hallucination risk, and unsupported claims.
- Build AI-agent evaluation harnesses, golden/reference datasets, prompt-regression coverage, evaluation history, scoring criteria, and failure taxonomies for deterministic and nondeterministic workflows, including happy paths, long-tail edge cases, and adversarial scenarios.
- Develop automated data-quality audits and repair workflows for publisher coverage, work identifiers, translation provenance, source context, cover matching, duplicates, multilingual metadata, schema relationships, ingestion safety, and relational integrity.
- Run pytest and Playwright API, integration, end-to-end, production-smoke, visual, accessibility, security, resilience, latency, and data-integrity tests; diagnose failures across logs, APIs, PostgreSQL, background jobs, and UI behavior and add regression coverage.

Lead QA Automation Engineer | Peapod Digital Labs

Oct 2017 – Apr 2022

Quincy, MA

- Led test strategy, manual and automated quality activities, defect triage, and release validation for large-scale e-commerce web and native mobile products across cross-functional Agile teams.
- Built Java-based Selenium and Appium frameworks and integrated regression coverage with TestNG, Maven, Bamboo, Sauce Labs, and Selenium Grid.
- Automated functional, integration, REST API, end-to-end, cross-browser, database, performance, and production-smoke tests; analyzed logs, SQL queries, failures, and flaky tests to isolate root causes and improve regression reliability.

Software QA Tester | Infomatrix Global

Mar 2015 – Oct 2017

Boulder, CO

- Built and executed Java/Selenium automated and exploratory/manual tests across the SDLC; performed functional, regression, integration, REST API, load, and performance testing with Jenkins, ReadyAPI, BlazeMeter, and JMeter; documented defects and verified fixes.

EDUCATION

M.S., Data Science, AI, and Machine Learning | Boston University

Computer Science & Programming | Quincy Community College | 2020

Degree in Agricultural Business | Agricultural University, Mykolaiv, Ukraine | 2011
